

Innovative Human-Systems Interface

Advanced Display Technology for Military and Aerospace Applications

Choosing the right display technology partner for your military/aerospace programs is one of the most critical choices you'll ever make. Since 1946, IEE has been a global leader in the design, test, support and fielding of advanced display systems for the most demanding mission critical applications. Today our extensive product portfolio includes flat panel displays, keypads and switch bezels, as well as lightweight enclosures for rugged environments with customizable integrated control functions such as video processing, high-speed communications and power conversion.

IEE Products...Proven in the Toughest Mil/Aero Programs

- **Handheld Devices and Tablet Displays:** ranging from 3.5" to 10.0" display sizes; combat proven, sunlight readable, MIL-qualified units designed for soldier mount, vehicle mount or man-pack handheld use.
- **Advanced Flat Panel LCD Displays:** from 3.5" to 24"; includes MIL-STD qualified displays, keypads and switch bezels as well as custom options such as lightweight enclosures, video processing, serial communication and power conversion for rugged environments.

Technology Integration for Continual Product Upgrades

Our proven expertise in rugged, integrated display design includes features such as active and passive brightness enhancement, optically bonded touch screens, custom anti-reflective/anti-glare (AR/AG) coatings/films, lightweight rugged packaging and 3D display technology from 3M in handheld units up to 4.8".

In-house Design and Manufacturing... Fast and Flexible

IEE's in-house design and high-volume manufacturing capabilities at our US facility provides the quickest route to creative solutions for demanding military and aerospace applications. We also provide extremely rapid prototyping and full-scale production. Many of our products are fully qualified to military environmental and EMI/EMC standards.
